

Post-Panamax Articulated Boom Cranes Kaohsiung, Taiwan

Hanjin Heavy Industries provided three cranes for Hanjin Shipping's new terminal in Kaohsiung. The cranes have an outreach of 52 m (170'-6") and a rated load of 40.6 t (40 LT). Due to the nearby airport, the height at the terminal is restricted to 70.35 m (230'-10").

Liftech provided the structural design of the frame and articulated boom and the mechanical design for the articulation.
