

Crane Procurement Long Beach, California

Port of Long Beach purchased fourteen new ZPMC cranes for its Pier T facility. The port retained McKay International Engineers and Liftech Consultants Inc. to provide full procurement services. Liftech co-authored the technical specifications, reviewed the structural design, and helped resolve difficult structural design issues. Liftech also audited the structural fabrication and the seafastening installation in China.

The cranes are suitable to serve 22-wide vessels and capable of handling 65 t loads under the spreader.
