

VPA Crane Procurement Norfolk, Virginia

Liftech provided Virginia Port Authority with crane procurement services, including technical specifications, crane design review, and manufacturing review. Liftech also provided engineering consulting with the design of the elevating girder crane whose upper works (trolley girder, boom, A-frames, stays, trolley girder support beams) can be hoisted to one of five preset operational elevations, depending on the ship size, to reduce the required hoist distance and unloading time.

The cranes were built by ZPMC in China.
